

About RMI

The Road Management Initiative (RMI) is a central component of the Sub-Saharan Africa Transport Policy Program (SSATP), a joint undertaking of the United Nations Economic Commission for Africa (UNECA) and the World Bank.

The primary objective of the RMI has been to secure sustainable improvements in road sector performance in Sub-Saharan Africa. The RMI is now an efficient, flexible tool, enabling countries to identify and address their road management policy problems. RMI experience has demonstrated that, to be effective, reforms must be country-specific and involve both public and private sectors in genuine partnerships.

Both African beneficiary countries and donors are involved in the RMI agenda, from defining to monitoring. Program management is the responsibility of the World Bank.

The RMI receives sponsorship from a number of bilateral donors, as well as the European Union and the World Bank.

About ISTED

ISTED, a non-profit organization, is a forum for study and debate, information and action, at the service of its public and private members in the public works, transport, country planning and environment sectors. It facilitates their international activities - primarily in non-OECD countries -, disseminates French knowhow throughout the world, and helps to implement international programs and projects with third country leaders.

ISTED unites several categories of members: companies, consultants, scientific institutions, and trade, teaching and research bodies. It also works closely with the French line Ministries in charge.

ISTED's core missions relate to information interchange and dissemination.

ISTED implements different operational actions: partnership programs, network guidance, appraisals and expert advice.

ISTED

CONTENTS

How the SOURCE⁽¹⁾ project began	p.3
Major changes in the road sector	
What tools to measure and analyse progress?	
Upstream answers, downstream answers	
SOURCE – to provide factual proof	
SOURCE, a brief insight	p.5
Speeds weighted by traffic volumes	
At the centre of the method: the floating vehicle	
A statistical integrator	
Common LV speed: a judicious approach	
Reference networks – for country-to-country comparisons	
Warning concerning the goals	
SOURCE destination	p.7
For major networks in developing countries	
What information?	
The macro-indicators	
From one period to another, comparing costs and service gains	
The field test	p.10
First test campaign over 4 countries	
2 nd stage: a measurement campaign in real conditions	
Validation of the methodological choices	p.11
Validation of the measuring method	
Validation of the choice of common speed as a guideline parameter: speed-roughness correlations	
SOURCE : the usual questions	p.14
Speed and safety	
Speed and... speed limits?	
Speed and national profiles?	
Speed and alignment	
A typical measurement campaign	p.15
Typical profile of a national measurement campaign	
Frequency	
Reference network trends	
How much?	
SOURCE development and by-products	p.16
Priorities for action	
The rolling observation system for Africa	
Adapting to specific problems	
An everyday tool: the simplified method	

Card No. 1: The SOURCE Toolkit, a free CD-ROM

Card No. 2: Floating Operation Method

Card No. 3: Adopting SOURCE: Decision checklist

Acknowledgements

This comprehensive document is the result of joint work developed over a period of nearly three years under the SOURCE project. The SOURCE project was initiated and conducted by the RMI (Road Maintenance Initiative), a SSATP component (Sub-Saharan Africa Transport Policy Program), which is a joint program administered by the World Bank, in conjunction with road sector donors and RMI partner countries. The SOURCE project has been piloted by Louis Fernique.

Our deep appreciation goes to:

- Road Administrations in the host countries of the experimentations:
The Ministry of Public Works of Cameroon, the Ghana Highway Authority, the Ministry of Public Works of Guinea and the Ministry of Public Works of Madagascar.
And to partners and contributors who have collaborated to fulfil the project:
- ISTED, in charge of coordination: Jean-Philippe Lanet and Guy Poirier
- The Laboratoire Central des Ponts et Chaussées (Central Road Research Laboratory) / International Studies and Research Department (LCPC/SERI): Paul Autret, Pierre Joubert and Claude Massonpierre, and technicians from the Regional Road Research Laboratories:
Marc Dumesnil Adélee, Jean Lefebvre and Yves Raynaud
- Benoît Ninnin, consultant, transport economist

and:

- Trainees from the École Nationale des Ponts et Chaussées (ENPC) working in the World Bank, AFTT2 (Africa, Transport): Seddik Spiga, Antoine Asfar and Salim Bouzebouk
- Trainees from the École Nationale des Travaux Publics de l'État (ENTPE) working in ISTED: Charlotte Antoine, Alexandre Breuil, Julien Langlet and Julien Neltner

and a special mention to:

- ABP Consult Limited, in Accra, Ghana, who carried out the first large-scale experimentation under the direction of J.B. Asafo-Boakye.
